Table of contents

1. Introduction

The LANtools, consisting of LANconfig and LANmonitor, serve for the administration of all Wireless LAN Access Points and Routers. The at a time latest versions are available for all LANCOM products. You can download it for free at http://www.lancom-systems.com

This document describes the innovations within version 4.02 as well as the modifications from version 3.52.

2. New features, modifications and history

LANconfig modifications from 4.00.0031 -> 4.02.0002

Corrections/modifications:

LANconfig:

- The setup wizard is now available for LANCOM DSL/I-10+
- Revised setup wizard for DynDNS provider „DynAccess"

LANconfig modifications from 3.52.0009 -> 4.00.0031
LANmonitor modifications from 3.52.0002 -> 4.00.0024

New features:

LANconfig:

- Firmware of all devices can be held up-to-date using the auto-update functionality.
  You may specify the firmware folder in the options menu.
- Support for a separately configurable SSH client in addition to telnet
- Extended configuration now supporting new features

LANmonitor:

- Buffer size may be configured for the activity-log window
- Contents of the activity log window may be cleared
- Window positions will be stored
- After deleting a device from the list or closing LANmonitor all related sub-windows will be closed
- New icon-tray for easier selection of additional information
- Error signalling at the top level of the folder-tree. This makes it easier to recognize errors, even with reduced folder-tree
- Display of WLAN connections using compression

Corrections/modifications:

LANconfig:

- The internet configuration wizard may now be used directly after having finished the basic wizard without LANconfig closing itself
- The VPN LAN-LAN wizard will now configure the first VPN - connection correctly
- Reading the configuration for the first time will now show all interfaces

LANmonitor:

- DSLoL online time will no longer be counted for the ISDN interface
- Accounting information will be shown in english if LANmonitor has been started with option /l:e
- Monitoring a device with LANmonitor now generates much less load
